PROFESSIONAL SUMMARY

Results-driven Java Full Stack Engineer with proven expertise in providing L1, L2, and L3 technical support for enterprise SaaS applications. Specialized in backend development using Java 8, Core Java, Spring Boot, and Spring Framework, with hands-on experience in RESTful API design and mobile application development. Proficient in troubleshooting, root-cause analysis (RCA), and performance monitoring across production systems. Adept at maintaining, optimizing, and enhancing backend services while collaborating cross-functionally with operations, QA, and product teams. Strong foundation in SQL Server 2014, JDBC, Angular 8+, HTML 5, CSS 3.0, JavaScript, JQuery, and Java Server Pages with a track record of implementing preventive measures and improving system stability.

TECHNICAL SKILLS

Programming Languages: Core Java, Java 8, JavaScript, HTML 5, CSS 3.0, JQuery, Kotlin (Android)

Backend Frameworks: Spring Boot, Spring Framework, Spring AI, Spring Security, Entity Framework, Java Server Pages, RESTful APIs

Frontend Technologies: Angular 8+, React, HTML 5, CSS 3.0, JavaScript, JQuery

Database Technologies: SQL Server 2014, MySQL, Vector Database, NoSQL, Database Design, JDBC

Mobile Development: Android (Kotlin/Java), Mobile Application Maintenance, Performance Optimization

Support & Operations: L1/L2/L3 Technical Support, Root-Cause Analysis (RCA), Performance Monitoring, Incident Resolution, System Troubleshooting

Core Competencies: Object-Oriented Programming, Design Patterns, Multi-Threading, Code Reviews, Cross-Functional Collaboration, Automation Workflows

PROFESSIONAL EXPERIENCE

Product Support Engineer | Zoho Corporation

2024 - Present

- Provided comprehensive L1, L2, and L3 technical support for enterprise SaaS applications serving global customers, ensuring 99.5% uptime and timely resolution of critical production issues
- Diagnosed and resolved complex application issues related to automation workflows, backend services, and system integrations using advanced troubleshooting methodologies and root-cause analysis (RCA)
- Monitored application performance, analyzed logs, tracked system crashes, and maintained service availability through proactive monitoring and incident response
- Collaborated extensively with engineering, operations, and QA teams for issue triage, prioritization, and cross-functional communication to drive product improvements
- Implemented preventive measures post-RCA and documented comprehensive resolutions, reducing recurring incidents by 35%
- Worked closely with product teams to resolve bugs, enhance system stability, and contribute technical input for platform modernization initiatives

KEY PROJECTS & TECHNICAL CONTRIBUTIONS

AI-Powered Post-Calamity Management Portal

Technologies: React, Streamlit, Spring Boot, Vector Database, MySQL, RESTful APIs

- Developed a full-stack disaster response portal with Spring Boot backend and React frontend for managing relief registrations and compensation workflows

- Engineered an RAG (Retrieval-Augmented Generation) chatbot using Vector Database to process unstructured SOS messages and convert them into actionable relief dispatches
- Built containerized Streamlit UI with dynamic GPS integration and implemented AI guardrails for reliable real-world emergency response
- Maintained backend services, optimized database queries, and ensured scalability for high-traffic emergency scenarios

Personalized AI Learning Assistance Platform

Technologies: React, Spring Boot, MySQL, Spring Security, JWT, Groq LLM, RESTful APIs

- Developed full-stack learning platform using Spring Boot for backend services and React for frontend, implementing AI-powered revision methodologies
- Designed and consumed RESTful APIs for seamless data exchange between frontend and backend components
- Implemented Spring Security with JWT tokenization for robust authentication and authorization mechanisms
- Optimized MySQL database design and backend performance for efficient data handling and personalized knowledge tracking

Smart India Hackathon 2022 – Automated Animal Identification (Government Project – INCOIS)

Winner – National Level Competition

- Led cross-functional team in designing end-to-end architecture for AI-based animal identification solution for government deployment
- Directed real-world data collection, model training, and workflow automation, driving strategic technical decisions
- Ensured scalable application workflow through strong leadership, problem-solving, and cross-functional collaboration with stakeholders

EDUCATION & ACHIEVEMENTS

Bachelor of Engineering – Electrical & Electronics Engineering

Bannari Amman Institute of Technology | CGPA: 8.53/10 | Batch: 2024

- **Winner – Smart India Hackathon 2022 (National Level Government Competition)**
- **Winner – Healthware 2.0 (National Level Hackathon)**
- Strong foundation in Object-Oriented Programming, Design Patterns, and Multi-Threading concepts
