Hiring Manager

Hexaware Technologies

India

Re: Application for Java Full Stack Engineer - Professional (Job ID: 627760)

Dear Hiring Manager,

I am writing to express my strong interest in the Java Full Stack Engineer - Professional position at Hexaware Technologies. With my proven track record as a Product Support Engineer at Zoho Corporation, combined with extensive hands-on experience in Java 8, Spring Boot, Angular 8+, and SQL Server 2014, I am confident that I possess the exact technical expertise and problem-solving capabilities your team requires.

In my current role at Zoho Corporation, I provide comprehensive L1, L2, and L3 technical support for enterprise SaaS applications serving global customers. I excel at diagnosing and resolving complex application issues related to automation workflows, performing root-cause analysis (RCA), and implementing preventive measures that have reduced recurring incidents by 35%. My daily responsibilities include monitoring application performance, analyzing logs, troubleshooting system crashes, and collaborating cross-functionally with engineering, QA, and operations teams—skills that directly align with your job requirements for software maintenance and support.

My backend development expertise is demonstrated through multiple full-stack projects where I designed and maintained robust backend services using Core Java, Java 8, Spring Boot, and Spring Framework. I have extensive experience designing and consuming RESTful APIs, working with both relational databases (SQL Server 2014, MySQL) and NoSQL databases (Vector DB), and implementing Spring Security with JWT tokenization. Additionally, my familiarity with mobile development concepts and performance optimization ensures I can contribute meaningfully to both backend and mobile platform maintenance.

What sets me apart is my combination of technical depth and proven leadership. As the winner of Smart India Hackathon 2022—a national-level government competition—I led a cross-functional team in designing the end-to-end architecture for an AI-based solution, demonstrating my ability to translate complex requirements into scalable solutions. My proficiency in all the required skills—CSS 3.0, Core Java, Angular 8+, Entity Framework, HTML 5, JDBC, JQuery, Java 8, Java Server Pages, JavaScript, and SQL Server 2014—makes me an ideal fit for this role.

I am particularly excited about Hexaware's commitment to innovation and technical excellence. The opportunity to work on production systems, participate in code reviews, and contribute to platform modernization initiatives aligns perfectly with my career goals. My strong foundation in Object-Oriented Programming, Design Patterns, and Multi-Threading, combined with my effective communication skills and collaborative mindset, will enable me to deliver immediate value to your team.

I am eager to bring my technical expertise, problem-solving abilities, and passion for building scalable solutions to Hexaware Technologies. I would welcome the opportunity to discuss how my background in L1/L2/L3 support, backend development, and cross-functional collaboration can contribute to your team's success. Thank you for considering my application, and I look forward to the possibility of speaking with you soon.

Sincerely,

Santhosh T
